PROBLEM STATEMENT

The main requirements from the client was to have **Unified Centralized management controller** for managing heterogeneous devices along with central management console as a UI for their EMS/NMS product clients along with humanly readable template support for configuration etc.

OUR SOLUTION

Zigron developed the management application with multiple protocol support like **SNMP, NETCONF, OpenFlow etc.** for different types of devices. Developed a Robust architecture with a symmetric design for **Embedded EMS, EMS and NMS systems**. The main task was Design and implementation of Self-referential canonical format Parser with High Availability support in a robust scalable environment. The main benefit was to have supporting **SDN and non SDN hybrid devices**, creating a new market for SDN deployments.
